Example of Case Study Based Question

The theme for World Children's Day 2021 was to help children to recover from interruptions and learning losses experienced through the pandemic in the last two years.

On this occasion our school organised different

sports activities to encourage the students to indulge in physical activities. Students of different classes participated in it by taking part in different activities like Cycling, flat race, high and long jump race, lemon and spoon race, etc.

During 100m race, time (in sec.) taken by a group of students to finish the race was recorded as follows:

10, 33, 6, 26, 14, 25, 4, 23, 5, 39, 7, 15, 8, 26, 34, 8, 15, 26, 34, 14 Using the given data answer the following questions:

- (i) Construct a frequency distribution table for the given data taking one of the class intervals as 20-30.
- (ii) Find the class-marks of the first and the last class-intervals from the table constructed in part (i).

SAMPLE OF FIGURE BASED QUESTION

Observe the figure given below and answer the questions that follow:-

- Q1) Which phenomenon is shown in the figure?
- Q2) What happens when a ray of light enters from air to glass?
- Q3) Name the incident ray and emergent ray in the above figure?
- Q4) What happens when a ray of light enters from glass to air?

SAMPLE OF CASES BASED QUESTION

Read the passage below and answer the questions that follow:

In an ecosystem, living organisms depends on one another for survival. Every organism is linked to many other organisms through food webs. Animals depend on plants for food and shelter; plants depend on animals for pollination, reproduction and seed dispersal. Fungi and bacteria decompose other organisms to add nutrients to the soil, and plants depend on these nutrients to grow. In this way, an ecosystem is a well balanced system in which each organism has an important role. Loss of even a few organisms affects this balance and harms the ecosystem.

Therefore biodiversity is important for the sustenance of an ecosystem. It provides a wide range of materials and food for survival, prevents extinction of species, and allows organisms to adapt to changes in the environment.

- Q1) What do you mean by ecosystem?
- Q2) Why conservation of bio diversity is important?
- Q3) Give two examples of decomposers.
- Q4) In an ecosystem animals and plants are interdependent on each other. Explain?

'The transformation from a plant to a finished product involves three types of economic activities. These are primary, secondary and tertiary activities. Primary activities include all those connected with extraction and production of natural resources.

Agriculture, fishing and gathering are good examples. Secondary activities are concerned with the processing of these resources. Manufacturing of steel, baking of bread and weaving of cloth are examples of this activity. Tertiary activities provide support to the primary and secondary sectors through services. Transport, trade, banking, insurance and advertising are examples of tertiary activities.'

- a) What are the types of economic activities?
- b) What does the word 'Agriculture' mean?
- c) Define Secondary activity.
